## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 and 9, drawn to a mobile phone comprising a varied metallization pattern near an edge of metallized areas, classified in class 455, subclass 300.
- II. Claims 2-6 and 10-14, drawn to a mobile phone comprising discrete components placed near an edge of metallized areas, classified in class 455, subclass 296.
- III. Claims 7 and 15, drawn to a mobile phone comprising placing capacitive gaps and inductive lines near an edge of the metallized area, classified in class 455, subclass 114.2
- IV. Claims 8 and 16, drawn to a mobile phone comprising multiple varying layers of conductivity placed near an edge of metallized areas, classified in class 455, subclass 301.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III and IV are related as process and apparatus for its practice.

The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process.

Art Unit: 2618

(MPEP § 806.05(e)). In this case, the process as claimed can be practiced by another and materially different apparatus such as the different approaches to modify the edge of the metallized area as stated in the different claim groups.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
